Cloud Security Maturity Action Plan (MAP)

Get clear directions for establishing or maturing your software security initiative in the cloud.

Overview

Organizations of all sizes are continually striving to balance modernization, dependability, productivity, and security as they increasingly use public cloud services to host and deliver their application workloads. But whether you're migrating to the cloud or developing cloud-native applications, you need to adapt your software security practices to address the unique opportunities and risks that come with cloud deployment. The Synopsys Cloud Security Maturity Action Plan (MAP) helps you build a detailed plan and roadmap with a prioritized list of recommendations to improve your cloud security strategy as part of your software security initiative (SSI).
